

DELIVERING CRANES FOR LARGEST BEACHFRONT DEVELOPMENT

Tishman Construction Corporation of New Jersey, which is serving as construction manager on the Revel Entertainment Casino Hotel project in Atlantic City, NJ, overcame an equipment-procurement challenge with AmQuip's assistance. Says Tom Keane, Tishman senior vice president and senior project executive: "AmQuip has been a team player right from the start. As one of our pre-qualified national contractors, it presented a competitive bid up front, and were able to deliver eight tower cranes and provide many other mobile-crane requirements for the project. Its value to this project is not only as an equipment supplier, it is also assisting with the site logistics, and have proved to be a professional, cooperative and supportive firm. AmQuip really goes above and beyond what anyone could expect from a crane company."

AmQuip cranes are being used to build the largest beachfront development in Atlantic City. The five-story, 140-ft-tall podium, or low-rise portion of the Revel project, will form a base for a pair of 700-ft-tall hotel towers. A total of 25,000 tons of structural steel will be used to build the podium, and the entire project will encompass approximately 7.5 million sq ft. ▲
